Off-the-shelf vs bespoke software

Many of us turn to software to help solve our business problems or improve the way we work. If this is you, you may find yourself having to decide between off-the-shelf software and bespoke software, and you need to consider all angles.

The ultimate software testing checklist

Software testing is an essential step in the development process to make sure that your software is functional, reliable, and of high quality. A thorough testing process will also uncover any potential issues or bugs before the software is released to the public.
